humquer/@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

buring sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate

chemistry or covered by high quality data (i.e., phred quality >=

30); an attempte was made to resolve all sequencing problems, such

as compressions and repeats; all regions were covered by at least

one plasmid subclone or more than one M13 subclone; and the

assembly was confirmed by restriction digest. The following

abbreviations are used to associate primary accession numbers given

in the feature table with their source databases: Em: EMBL; Sw:

SMISSPROT; Tr., TREMBL; Wp., WORNDEP; Information on the WORNDEP,

database can be found at

http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence

was generated from part of bacterial clone contigs of human

chromosome 10, constructed by the Sanger Centre Chromosome 10

http://www.sanger.ac.uk/HGP/Ch110

RP11-348NS is from the library RPC1-11.2 constructed by the group

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention relates to genotyping an alpha-2B, 2A, or 2C adrenergic receptor gene (I)-(III) by detecting a polymorphic site, comprising; (a) obtaining a sample having a polymorphic site, comprising; (b) detecting a polymorphic site comprising an alpha-2B, and alpha2A or alpha2C or fragment or complement of; and alpha-2B, alpha2A or alpha2C or guanine at positions 901-909 of (I), a site comprising oytosine or guanine at positions 901-909 or a site comprising (Vtosine or (B)) (ggggcggccg) or (B) (ggggcggctgag) at positions 961-972 of (III). The method may be used for genotyping an alpha2B, alpha2A or alpha2C receptor gene and further used to determine whether an individual is at increased risk of developing a disease associated with alpha2B, alpha2A or alpha2, comprising detecting a polymorphic site which correlate to disease selected from cardiovascular disease, central nervous system disease and combinations of these. In addition, the technique may be used to predict an individual's response to an alpha2B, alpha2A, or alpha2C agonist (e.g. epinephrine, clonidine, oxymetazoline, guanabenz, utility BHT933 and combinations of these) or arragonist (e.g. yohimbine, prazosin, ARC 239, reuwolscine, idazosan, tolazoline, phentolamine and combinations of these or predetermined response (where the response is correlated to adenylyl cycles. The companies of the physical compinations of compin

methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylation then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligonucleotides and/or prognosis of side effects of the method is used: (i) for diagnosis and/or prognosis of side effects of the method is used: (i) for diagnosis and/or prognosis of side effects of the method is used: (i) for diagnosis and/or prognosis of side effects of the method is used: (i) for diagnosis and/or prognosis of side effects of the method polymorphisms (SNP's); and (ii) for differentiation of call or tissue polymorphisms (SNP's); and (ii) for differentiation of call or tissue methylation status of many C residues to be determinated simulaneously.

ARQ13410-ARQ54121 represent genomic DN sequences used to illustrate the method for determining the degree of cytosine methylation described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                              Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA

methylation of a particular revealed in motif 5' CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic own that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the lasses of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of the repeutic drugs and of a wide range of diseases, e.g. cancer, disorders the repeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.

ARQ1410-ARQ121 represent genomic DNA sequences used to illustrate the methylation status.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                     Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention describes a novel method for determining the degree of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antiarteriosclerotic; antianaemic; cytostatic; nootropic; neuroprotective; anti-HIV; anticonvulsant; ophthalmological; antirthermatic; antiarthritic; antidiabetic; antipsoriatic; antinflammatory; cancer; eye disease; arteriosclerosis; anaemia; acute myeloid leukaemia; Alzheimer's disease; AIDS; epilepsy; neurofibromatosis; rheumatoid arthritis; psoriasis; bowel disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; immune system disease; cytosine methylation; antiasthmatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The invention relates to nucleic acids comprising a segment of chemically pretreated DNA of adrenergic alpha-1C-receptor gene. The invention also relates to oligonuclectides or peptide nucleic acid (PNA) oligoners useful for detecting cytosine methylations. The pretreated DNA is useful for the diagnosis or therapy of behavioural disorders, neurological disorders and cancer, in particular major depressive disorder. Tourette's syndrom, schizophrenia, psychiatric and neurological disorders, smoking, drug abuse, alcoholism, personality traits, compulsive gambling, human immunodeficiency virus dementia, migraine, behaviours in schizophrenic and schizoaffective patients, and sucidal behaviour in patients with schizophrenia. The nucleic acid is useful for detecting the methylation state of all CpG dinucleotides and/or single nucleotide polymorphisms (SNPs). The present sequence is human chemically treated genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                 Novel nucleic acid useful for diagnosis and therapy of behavioral disorder, neurological disorder and cancer, comprises a sequence of segment of chemically pretreated DNA of adrenergic alpha-1C-receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              :,

This is the DNA sequence of a primer that was used in the PCR amplification of DNA encoding the N-terminal portion (including 22 amino acids proximal to the 5th transmembrane domain) of rat cholecystokinin CCKB receptor, a G protein coupled receptor (GPCR). The PCR product was used in the construction of an intracellular loop 3 (IC3) deleted CCKB receptor mutant. Deletion of a portion of IC3 of mammalian GPCRs is correlated with improved functional expression in yeast cells with retention of full ability to couple to the heterotrimeric G protein. The invention relates to mutant GPCRs with constitutively activating mutations that permit the activation of the receptors' functional activity in the absence of activating ligands, host cells that contain mutations that promote the functional activity of the GPCRs, host cells expressing such receptors, and vectors useful for making such cells. The host cells are useful in high throughput screening assays for therapeutic drugs, inserticides, mearacides etc., and are especially useful for assays.
                                 Novel host cells comprising heterologous G protein-coupled receptor modified to be constitutively active, useful for high throughput screening assays for e.g. drugs, insecticides or nematacides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New G protein-coupled receptors with a mutation in an intracellular domain, useful for high throughput screening assays for e.g. drugs, insecticides or nematocides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       G protein coupled receptor; GPCR; human;

deputies of DNA encoding the N-terminal portion (including 3) amino acids proximal to the 5th transmembrane domain) of human alpha 2A adrenceptor, a G protein coupled receptor (GPCR). The PCR product was used in the construction of an intracellular loop 3 (IC3) deleted receptor mutant. Deletion of a portion of a mammalian GPCRs is correlated with improved functional expression in yeast cells with retention of full ability to cuple to the heterotrimeric G protein. The invention provides modified GPCRs having a mutation in IC3 that results in an improved functional response in cell-based assays. The modification promotes growth stimulation by a GPCR agonist, especially by improving coupling between the receptor and a heterotrimeric G protein. Polynucleotides encoding the mutated GPCR, chimeric G protein. Polynucleotides can be claimed. The modified GPCRs can be used in improved high recommendation by a GPCR agonist encoding the mutated GPCRs can be used in improved high chromomy structure screening assays (especially in yeast cells) for the content of the modified GPCRs can be used in improved high

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -

Disclosure; SEQ ID NO 7495; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. Isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful on the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, harrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune discreter e.g. Addison's disease, allergies, autoimmune characteristics, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular discreter such as mycoardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and copilepsy; and (f) infections diseases such as viral, bacterial, fungal and parasitic infections.

```
The present invention describes a polypeptide (I) which is a polymorphic variant (PV) of the acetyl-Coenzyme A acyltransferase (peroxisomal 3-oxoacyl-Coenzyme A thiolase) ACAAl protein (BBB0516). ACAAl is located on chromosome 3p23-p22. (I) can be encoded by ABA91286 (or ABA91288) where the sequence comprises one of the haplotypes shown in Table 4 or one of the haplotype pairs shown in Table 3, where Tables 3 and 4 are given in the specification. The polymucleotide encoding ACAAl can be used for providing haplotype and genotype information of an individual. Putthermore, the polymucleotide is useful for the treatment of disorders related to its abnormal expression or function. The present sequence represents the human ACAAl gene, featuring all the single nucleotide polymorphisms (SNP) possible, from the present invention.

ACAA1 is located on chromosome 3p23-p22. (I) can be encoded by ABA91286 (or ABA93280) where the sequence comprises one of the haplotypes shown in Table 4 or one of the haplotype pairs shown in Table 3, where Tables 3 and 4 are given in the specification. The polynucleotide encoding ACAA1 can be used for providing haplotype and genotype information of an individual. Furthermore, the polynucleotide is useful for the treatment of disorders related to its abnormal expression or function. The present sequence represents the human ACAA1 gene, where all the single nucleotide polymorphisms (NNP) possible have been given in the sequence using the
                                                                                                                                                                                                                                                                                                                                                                                                      ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; cytosine methylation; 5'-CpG-3'; uracil; cytosine; diagnosis; drug; side effect; cancer; central nervous system; cardiovascular; gastrointestinal; respiratory system; single nucleotide polymorphism; SNP; cell differentiation; ds.

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert convert convert convert convert convert convert converts the degree of but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. DNA that contains the target C is amplified acid (PNA) oligomers converts of oligomers and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the classes of oligomers. The degree of methylation is calculated. The method cisused: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders contain nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide colymorphisms (SNP's); and (ii) for differentiation of call or tissue colymorphisms (SNP's); and (ii) for differentiation of call or tissue colymorphisms (SNP's); and (ii) for differentiation of call or tissue converts investigating call differentiation of call or tissue colymorphisms (SNP's); and (ii) for differentiation of call or tissue colymorphisms of many C residues to be determined simultaneously.

ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the contain and contains the degree of cytosine methylation described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                   methylation of a particular cytosine in a motif 5'-0pG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonuclecides and/or peptide-nucleic acid [PNA] oligoners and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligoners, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of call or tissue methylation status of many C residues to be determined simultaneously. ARQ13410-ARQ3412 represent genomic DNA sequences used to illustrate the chart of the contract of the degree of cytosine methylation described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                        This invention describes a novel method for determining the degree of

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid thetkemia, Alzheimer's disease, Allo, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory(ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, cytostatic, antidepressant, neuroleptic; nootropic, antiaddictive, datenergic alpha-Ic-receptor, cytosine methylation; therapy; alcoholism, behavioural disorder; neurological; psychiatric; cancer; schizophrenia; jourette's syndrome; smoking; human immunodeficiency virus dementia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel nucleic acid useful for diagnosis and therapy of behavioral disorder, neurological disorder and cancer, comprises a sequence of a segment of chemically pretreated DNA of adrenergic alpha-IC-receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                          Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

The invention relates to nucleic acids comprising a segment of chemically createded DNA of adrenergic alpha-1C-receptor gene. The invention also relates to oligonuclectides or peptide nucleic acid (PNA) oligomers useful for detecting cytosine methylations. The pretreated DNA is useful for the diagnosis or therapy of behaviours, neurological disorders and cancer, in patricular major depressive disorder, routete's syndrome, schizophrenia, psychiatric and neurological disorders, smoking, cd rung abuse, alcoholism, personality traits, compulsive gambling, human immunodeficiency virus dementia, migraine, behaviours in schizophrenic and schizopfrenic acid is useful for detecting the methylation schizophrenia. The nucleic acid is useful for detecting the methylation constant of all CpG dinucleotides and/or single nucleotide polymorphisms

Sequence 6, Application US/10026188

Patent No. US20020164645A1

GENERAL INFORMATION:

APPLICANT: Zhang, Yifeng

APPLICANT: The Regents of the University of California

TITLE OF INVENTION: Assays for Taste Receptor Cell Specific

TITLE OF INVENTION: Assays for Taste Receptor Cell Specific

TITLE OF INVENTION: Lon Channel

FILE REFERENCE: 02307E-114910US

CURRENT APPLICATION NUMBER: US/10/026,188

CURRENT PILING DATE: 2001-12-21

PRIOR APPLICATION NUMBER: US 60/259,379

NUMBER OF SEQ ID NOS: 8

SEQ ID NO 6

SEQ ID NO 6

FERNANCE: PRESENCE OF Windows Version 3.0

CDNA made by oligo-dr priming. Size-selected by column fractionation; average insert size 1.08 kb. Library was amplified once on solid support and plasmid DNA from library was prepared. The library DNA was normalized by method ## from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806; 0.5 microgram single-stranded library plasmid DNA was mixed with 5 micrograms PCR product representing library inserts and hybridized to an Ecot of Single-stranded (unhybridized) plasmids were isolated

    Single-stranded (unhybridized) plasmids were isolated
by hydroxyapatite chromatography and used to make this

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0

/noce="Organ: Pancreas; Vector: pSPORTI; Site_1: Not 1; Site_2: Sal 1; Starting library constructed using Superscript Plasmid Library kit (Life Technologies). CDNA made by oligo-dT priming. Size-selected by column fractionation; average insert size 1.08 kb. Library was amplified once on Solid support and plasmid DNA from library was prepared. The library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806; O.S microgram single-stranded library plasmid DNA was mixed with 5 micrograms PCR product representing library inserts and hybridized to an Ecot of 20. Single-stranded (unhybridized) plasmids were isolated by hydroxyapatite chromatography and used to make this library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

/ Lissue type="Islets of Langerhans"
/ dev_stage="Adult"
/ lab_host="DAULt"
/ lab_rote="Organ: Pancreas; Vector: pSPORT1; Site_1: Not 1;
/ Site_2: Sal 1; Starting library constructed using
SuperScript Plasmid Library kit (Life Technologies). CDNA
made by oligo-dT priming. Size-selected by column
fractionation; average insert size 1.08 kb. Library was
amplified once on solid support and plasmid DNA from
library was prepared. The library DNA was normalized by
method #4 from Bonaldo, Lennon, and Soares 1996 Genome
Research 6:791-806; 0.5 microgram single-stranded library
plasmid DNA was mixed with 5 micrograms POR product
representing library inserts and hybridized to an Ecot of
20. Single-stranded (unhybridized) plasmids were isolated
by hydroxyapatite chromatography and used to make this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
